Come to all the classes and study for the tests.

EXTRA CREDIT (5 pts.) What advice would you give a person on the first day of Calculus 1 class that would help them to be successful in the class?

**DO. YOUR. HOMEWORK. EVERYDAY!**

No exceptions. Ever.

Do not skip classes or do all the practice problems.

Study, study, study, and do the homework for fun.

I would tell them to make sure they studied and memorize all the derivative formulas. Also, make sure you understand everything and don’t be afraid to ask questions.

Always do your homework and ask questions if you don’t completely understand something. Go over past tests too!

Do your homework a million times.

Don’t get excited when you find out that the homework problems are not required, **DO THEM ANYWAY**! Otherwise you find out the hard way that it’s the difference between a pass and a fail.

Keep all the tests. Get blank test copies and try formulas. **MEMORIZE THE**

Do all of the homework that is assigned. Do it more than once.

Pay very good attention. **Come to class!**

Do the homework! **STUDY!**

Don’t work 60 hours a week while trying to take the class.
EXTRA CREDIT (5 pts.)  What advice would you give a person on the first day of Calculus I class that would help them to be successful in the class?

I would advise anyone starting this class to take a few days to review all algebra, geometry, and trig.  The new material is hard enough without re-learning previous math skills.

Listen carefully, ask questions, and take good notes.
It also never hurts to participate in class.

I would tell them to always do homework problems on their own to make sure they understand what is going on & if they don't understand to ask questions.

The best way to succeed in Calculus I is to come to class, pay attention, do all of the homework, & ask questions when you are confused.

Drinks (coffee) & turn off your cell phone.

I would tell them the following:
- Attend class every day!  Don't get discouraged if you don't understand something.  If you ask questions, & work problems.
- To participate and be an active speaker, be involved in class. Do your homework, ask questions if you do. Test yourself before exams and see if you understand main concept/rule of what you're learning in order to answer advanced question/problem.

Do the homework even though there isn't a grade and come to class.

Study what you think you know, just as much as you don't.  And Power/Chain Rule are gods.

Obviously not what I did.  But, do ALL the homework and get HELP when it's needed.  Also, getting help from the internet doesn't seem to be enough.

Read the chapters, do homework and ask questions.
EXTRA CREDIT (5 pts.) What advice would you give a person on the first day of Calculus 1 class that would help them to be successful in the class? (Remember the HW problems you did, do more, HW sheets were assigned, and go over test questions and remember sheets per night.

I would tell them to stay on top of their work even tho it isn't graded. Otherwise you will get behind and miss a lot! Go get help when you need it.

Do the homework! You will never fully understand Calculus if you do not do the homework problems (and be able to do them ALL fast). Come every day and do the homework problems every night. Also reviewing Pre-cal would be beneficial.

Know your pre-cal. Expect to challenge yourself, and do all of the homework until it is perfect!
